HCMC Home Health
recently earned **4 STARS**
for **Quality of Patient Care**

Home Health

Home Health is designed to provide the smoothest transition from hospital to home. Patients must be referred to Home Health and must be homebound, need skilled care in the home, and be under the care of a physician. The staff provides valuable physical assessment, evaluation, and instruction for the patient and family, while closely monitoring the patient's condition with regular reports to his or her physician.

Home Health services provided include:

- Skilled nursing care
- IV therapy
- Chemotherapy
- Pediatric & maternity care
- Physical therapy
- Occupational therapy
- Speech therapy
- Home health aides
- Medical social services
- Laboratory services
- Medical supplies
- Wound care
- Patient & caregiver teaching
- Injections
- Central line maintenance
- Total parenteral nutrition

Hospice

We provide a comfortable, supportive environment, ensuring that the quality of life is the best it can be. We pay special attention to the physical, spiritual, and psychological needs of our patients and their families. Hospice patients must be certified by their primary care physician as having limited life expectancy and their physician must agree to manage their care. Referrals to hospice are made by physicians, hospital personnel, patients, family, friends, and clergy.

Hospice services provided include:

- Licensed nurses are on call 24 hours a day
- Social Workers provide counseling for the patient and family members.
- Volunteer support services are available to assist the patient and family as needed to provide support and companionship, and to run errands.
- Bereavement counseling, if needed, is provided up to a year following the patient's death
